

SHEENGUARD BLANKET-BOOMS

Oil Removal Absorbent Booms

EPA Approved As A Sorbent For Use On Water

Custom Size Your Blanket-Boom:

- Blanket-booms are filled with PetroGuard® high capacity solidifying absorbent.
- Absorbent pillows clip together to form a continuous blanket with a higher surface area than conventional round booms.
- Blanket-booms will not re-release oil once absorbed as will other absorbents. (Note- heavy concentrations of floating oil should first be treated with PetroGuard® solidifying absorbent particulate).
- Once heavy concentrations are removed, SheenGuard blanket-booms can be left in place to continue to remove persistent oil sheens and rainbow.
- SheenGuard blanket-booms are manufactured with extra flotation and will not sink.
- Blankets will remain on the surface of the water, absorbing all traces of oil, sheen or rainbow.
- Reduce operating costs. SheenGuard absorbent products will absorb over 4 times their own weight in oil.
- SheenGuard will reduce man-hours by replacing conventional, frequently changed polypropylene round booms with our long lasting oil and sheen removal devices.

Blanket Booms for use in:

- Anywhere conventional booms are used
- Industrial Clarifier ponds
- Inland water areas and bays
- Marinas and harbors
- Streams and Lakes
- In conjunction with skimmers

Remove Floating Sheens Caused By:

- Gasoline
- Kerosene
- Crude oil
- Solvents
- Hydraulic Oil
- Fuel Oil
- Silicone-based oil
- Machine oil
- Heating oil
- Other refined petroleum products
